

Requirement Analysis

1. Problem Statement

Higher education institutions use different software solutions to manage admissions, student records, finance, attendance, examinations, and administration. While these ERP systems provide comprehensive management features, many colleges still face challenges during the admission process due to fragmented workflows, manual verification, multiple software usage, and repetitive administrative tasks.

The objective is to develop a configurable cloud-based SaaS platform that simplifies and digitizes the admission workflow while integrating with existing systems whenever possible.

2. Existing Software (Market Research)

Software	Purpose	Strengths	Common Challenges
MyClassboard	Complete College ERP	Admissions, Fees, Attendance, Exams, Parent App	Large ERP, expensive for small colleges, many unused modules, customization may require vendor support
MasterSoft ERP	Higher Education ERP	Admission, Student Records, NAAC, NBA, Exams	Complex UI, heavy system, expensive, training required
iCloudEMS	University ERP	Complete campus management	Large implementation time, feature overload
Campus 365	Cloud ERP	Admissions, Finance, HR, Communication	Subscription cost, may include modules colleges don't need

Entab	School/College ERP	Administration & Academics	Primarily education management rather than admission-focused
ERPNext (Open Source)	General ERP	Highly customizable, open source	Requires technical expertise to deploy and maintain
TallyPrime	Accounting & Audit	Financial accounting, GST, Audit	Not designed for admission workflow
CAP Portal / Government Portal	Seat Allocation	Merit list, Seat allotment	Colleges cannot customize workflow

3. Research Findings

From our research:

- Engineering & Polytechnic admissions are handled through CAP.
- Medical, Pharmacy and Law have their own centralized admission authorities.
- Colleges generally use multiple software rather than a single platform.
- TallyPrime is mainly used for accounting and audits.
- Attendance is often managed through a separate application.
- Existing ERPs focus on institution-wide management rather than optimizing admission workflow.
- Many colleges still require manual approvals, document verification and coordination between departments.

4. Existing System Limitations

Although ERP systems provide numerous features, colleges still experience:

- Multiple software for different departments
- Manual document verification

- Paper-based approval process
- Repeated data entry
- Limited workflow visibility
- Difficult coordination between departments
- Time-consuming admission processing
- Limited AI assistance
- High implementation and maintenance cost for full ERP solutions
- Feature overload (many colleges use only a subset of ERP modules)

5. Proposed System

Admitix is a cloud-based multi-tenant B2B SaaS platform designed to streamline the admission workflow for higher education institutions.

Instead of replacing existing ERP systems, Admitix aims to complement them by providing:

- Student onboarding
- Digital document management
- AI-assisted verification
- Approval workflow
- Admission tracking
- Student record creation
- Dashboard & analytics
- Future ERP integration

6. Scope

Institutions Covered

- Engineering Colleges
- Medical Colleges
- Pharmacy Colleges

- Law Colleges

Functional Scope

- Admission Management
- Student Onboarding
- Document Verification
- Workflow Automation
- Student Records
- Dashboards
- Reports
- Notifications

Future Scope

- ERP Integration
- University Portal Integration
- Mobile Application
- OCR Enhancement
- AI Recommendation Engine
- API Integration

7. Objectives

- Simplify admission workflow.
- Reduce manual effort.
- Digitize document verification.
- Improve transparency.
- Centralize admission records.
- Provide configurable workflows for different institutions.
- Enable AI-assisted admission processing.

- Support multiple colleges through one cloud platform.

8. User Roles (Role-Based Access Control - RBAC)

The proposed system follows a **Role-Based Access Control (RBAC)** model, where each user is assigned permissions based on their responsibilities. This provides secure access, improves workflow management, and allows institutions to configure roles according to their organizational structure.

1. Super Admin (SaaS Provider)

Responsibilities:

- Manage registered colleges/institutions
- Manage subscriptions and plans
- Configure platform settings
- Monitor system usage and analytics
- Provide technical support
- Manage platform security

2. Institution Admin

Responsibilities:

- Manage institution profile
- Create and manage user accounts
- Assign roles and permissions
- Configure admission workflows
- Manage departments, courses, and programs
- View institutional reports and dashboards

3. Admission Officer

Responsibilities:

- Review student applications
- Verify uploaded documents
- Request document corrections
- Approve or reject applications
- Track admission progress

4. Department Reviewer

(Can represent HOD, Principal, Dean, Admission Committee, or any authorized academic authority.)

Responsibilities:

- Review admission applications
- Verify eligibility criteria
- Approve or reject applications
- Add remarks and recommendations

5. Finance Officer

Responsibilities:

- Verify fee payments
- Generate payment receipts
- Manage fee records
- Confirm financial clearance
- Process refunds (if applicable)

6. Registrar / Student Records Officer

Responsibilities:

- Create permanent student records
- Assign Roll Number / PRN
- Generate student profile
- Generate ID cards
- Maintain admission records
- Export student data to ERP or university systems (future integration)

7. Faculty (Optional)

Responsibilities:

- View admitted student information
- Access department-wise student records
- View reports assigned by the institution

8. Student

Responsibilities:

- Register/Login
- Complete admission application
- Upload required documents
- Track admission status
- Receive notifications
- Download receipts and admission documents
